DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 6, 7, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Leore.

The device as claimed is disclosed by Leore with a removable slidable attachment 10 with an indentation 20 and a hole for a tape hook having attachment means 44 for removably attaching the device to a tape.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Leore in view of Bergeron.

The device as claimed is disclosed by Leore as stated in the rejection recited above for claims 1-3, 6, 7, and 11, but lacks the engaging surface being tacky. Bergeron teaches using an

attachment for a tape hook that has non-skid properties to keep the hook attachment in contact with the workpiece. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a non-skid (tacky) surface on the attachment of Leore as taught by Bergeron to keep the attachment in contact with the workpiece.

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Leore in view of Langsner.

The device as claimed is disclosed by Leore as stated in the rejection recited above for claims 1-3, 6, 7, and 11, but lacks the engaging surface having at least on projection extending backwards to aide in engagement with the workpiece. Langsner teaches using projections 32 extending backward from the tape hook to aide in engagement with the workpiece. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to add projections to the back of the attachment of Leore as taught by Langsner to aide in the engagement to the workpiece.

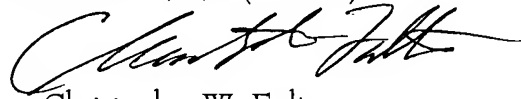

Allowable Subject Matter

6. Claims 8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
